Klan Idea O. K., Methods Bad, Says Straton Pastor, in Sermon, Denies His Church Is Ku-Klux "Nest" and Denounces Organization's Practices Organization's Practices Walles that paper wishes to stand convicted "of the worst sort of yellow journalism" it should frankly and openly admit their injustice, Dr. Straton aummed up his own attitude toward there are good men in the ranks of the Ku-klux Klan and that many of them are actuated by the highest and noblest motives. I believe, however, that such men have acted on sentiment in connecting themselves with this organization, and they have not thought the proposition through to its logical and inevitable results." Contrary to American Principles

altar, the hallers and several hundred after, the hallers and several hundred are turned away. It was not a hoselie audience, to all appearances. The sention of Mayor Hylan's name in connection with his recent order to the Police Department to hustle the Klan cut of the city brought subdued hissing and seme laughter. Mention of the Klan was greeted with round after round of applause. There were several distinct groups scattered throughout the church which led in this applause. Dr. Straton's statement that he believed in the idealism and virtue of the Klanmen and their principles was received in this fashion. His denunciation of the practices and methods of the Klan met with respectful silence.

Denounces New "Color Scheme"

The part that the Rev. Oscar D. Haywood, avored Klokard, or organizer for
the Klan. In New York, has had in the
activities of the church was minimized
by Dr. Straton. Although his name
still appears as general evangelist of
the church, Dr. Haywood, by reason
of his Klan work, has automatically
serred the purely honorary relationship which he held since his own
church, the Collegiate Baptist Church,
was consolidated with the Calvary
Church, he said. Should Dr. Haywood
give up his position as Klokard, Calvary Baptist Church would welcome
him back in his old capacity, Dr.
Straton declared.

sealist the Klain and its New York adherents drew sharp criticism of the Police Department from Dr. Straton. He thought he could help the Mayor with a little prayer and fraternal council, and even "Brother Enright" might be helped, but he expressed the hope they would be an successful with their attention to him and Calvary Baptist Church as he was in his investigation of the dance halls and cabarets and the lack of law enforcement in them several years ago.

Would Clean Up the Police

Dr. Straton even expressed the wish that he might be Police Commissioner for a time. Then the patrolmen would be started out of their beats each day with a prayer meeting and other referms would be instituted which would greatly improve things "all down the lack." For one thing, there would not be so much flabbiness that the police could not handle a mob such as rioted at the Irish meeting at the Earl Carroll Theater a week ago, if Dr. Straton were commissioner. He suggested to Mayor Hylan and Commissioner Enright that they give a little attention to "green and red revolutionists," who promoted that riot, and referred to the disorder as "green secterianism of the Tankest sort."

The charges against the church, which first appeared in "The World," have been printed far and wide, and should be sould not be and red revolutionists, who have been printed far and wide, and wooden blocks or blocking."

PLAIN FACTS about the new Encyclopaedia Britannica

"THE FINEST GIFT YOU CAN MAKE"

NEXT to Shakespeare and the Bible, no work has ever had a wider circulation among all classes of people or achieved a higher reputation than the Francisco among all classes of people or achieved a higher reputation than the Encyclopaedia Britannica. More copies of the Britannica have been sold than of all other encyclopaedias combined. It is constantly used by more persons seeking information and knowledge than any other work in existence.

The pre-eminent position of the Britannica is not a mere accident; it has been achieved because of the paramount value of this work to people in all walks of life. On this page you will find some of the "plain facts" about the thirty-two volumes of the new Encyclopaedia Britannica-facts which are bound to interest you, even though you may be familiar with this wonderful work. But only an outline of these facts can be given here. An elaborate booklet has been prepared giving full details about the Twelfth and latest Edition of the Britannica. This booklet is yours for the asking.

The Britannica Policy

For more than 150 years the Encyclorpaedia Britannica has had only one policy-to give the facts with fearless accuracy and impartiality.

Hugh Chisholm, Editor-in-Chief.

states this policy in these words: "The Encyclopaedia Britannica itself has no side or party, it attempts to give representation to all parties, sects and sides. In a work which deals with opinion and controversy at all, it is manifestly impossible for criticism to be colourless; its value as a source of authoritative exposition would be very different from what it is if indi-vidual contributors were not able to state their views fully and fearlessly

"The easy way to what is sometimes considered impartiality is to leave controversy out altogether; that would be to avoid responsibility at the cost of perpetuating ignorance, for it is only in the light of the controversies about them that the importance of these questions of doctrine and opinion can be realized. The object of the present work is to furnish accounts of all sub-jects which shall really explain their meaning to those who desire accurate information." - From the Editorial

That policy was the policy of the Encyclopaedia Britannica when the first edition was prepared more than 150 years ago, and it is the policy of the editors to-day.

2000 Expert Contributors

The Encyclopaedia Britannica is tributors who represent, some as scholars, some as industrial experts, some as explorers, financiers, chemists, surgeons, agriculturists, engi-neers, sailors, soldiers, administrators, and so on through a long list every variety of profession and every kind of human interest.

They were selected solely with a view to their commanding knowledge of the subjects upon which they were invited to write. For example, a Dutch scientist wrote on light, a Columbia professor on an-cient China, a German on the microscope, while the article on Mahom-medan law came from the Hartford Theological Seminary, notwith-standing the fact that the British Empire has more Mahommedan subjects than any other country.

These contributors represent 23 countries, and include, among others, 368 Americans, 67 Germans, 48 Frenchmen, 14 Italians, 13 Dutchmen, 7 Russians, 3 Jap-anese, 11 Canadians, 3 Serbians, 3 Hungarians, 3 Rumanians, 8 Danes, 2 Czechslovaks, 22 Aus-

The Encyclopaedia Britannica in each of its editions has been written by recognized authorities, men and women who stand in the very fore-

Information 100% Available

The Encyclopaedia Britannica not only contains more information than any other so-called work of reference but every item of this information is made accessible for instant use by a unique feature of this encyclopaedia, the index pages, of which there are nearly 1000. These pages contain 500,000 references alphabetically arranged. By means of the index you have immediate access to half a million items of knowledge.

If each of the articles—more than 40,000 in number—in the new Britannica is compared to a cabinet filled with all the information on a certain subject, the index furnishes the pigeon-holes, each properly marked with its alphabetical label, in which this infor-mation is separated and sifted so that each pigeon-hole, or index entry, con-tains just that particular item of infor-mation that is needed at the moment.

No other encyclopaedia or general work of reference has this valuable index feature. Without this aid the owner of an encyclopaedia is much in the same position as the man with his valuables locked up in a safe of which he has lost the combination. The complete index shows the reader his complete index shows the reader his way to information on hundreds of thousands of topics contained in the articles in the work, in addition to those main topics which are indicated by article headings. It is a search-light which can be turned instantly upon any given spot in the whole realm of knowledge.

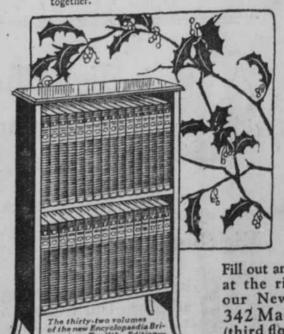

The Cheapest Book in the World

15,600 illustrations and maps—contain 49,000,000 words, which would make 476 volumes of ordinary textbook size. These 476 text-books would certainly cost as much as \$1100, yet the Britannica costs only a small

On the other hand, no collection of separate books could equal the Britannica in usefulness and completeness. The 476 ordinary volumes would occupy a great deal more space and be far less convenient for reference. The Britannica on India paper takes up ONLY THIRTY-PIVE INCHES OF SHELF ROOM.

Moreover, the Britannica is far more than a mere book of reference for occasional consultation; it is a complete library of information for every-day use and constant reading. It is a book for recreation as well as instruc-

It is clearly of great advantage and convenience to the reader that he should have this vast amount of

An Up-to-the-Minute Work

With the single exception of the new ENCYCLO-PAEDIA BRITANNICA, practically all general sources of knowledge are out of date. But the new Britannica-Twelfth Edition-brings the story of mankind down to the year 1922. Think what that means! Other books are badly out of date because more revolutionary changes have happened in the past few years than in any previous 100 years.

In these few years—hardly more than a decade—twenty-four monarchs were driven from their thrones; the maps of Europe and Africa were torn up and re-made; 120,000,000 women were given the ballot; the United States spent 81/2 times as much on war as in the previous hundred years; wore coal, more oil, and more steel were produced than in the entire 19th century—and the American people spent more on motors, "movies," cigarettes, and education than ever before, more on education for example than in the 100 years from 1800 to 1900.

In the past few years Einstein announced his epoch-making Theory of Relativity and Michelson at Mt. Wilson observatory made the first measurement of the diameter of a star. Other men of science found new methods of charting the hidden recesses of the mind. Still others discovered that matter is not a mere "dance of the atoms," but actually a dance of the electrons—particles of electricity infinitely smaller than atoms. These discoveries open possibilities so great that the mind stands aghast. And in the same period inventors perfected the radio, made aeroplanes safe for daily travel and discovered and applied new ways of "curing rubber, welding metals, and manufacturing steel.

The changes, inventions and discoveries of modern times have already remade the world. They have revo-lutionized our lives. To learn the full story of all these recent developments, so important to you and to every-one, you have only to turn to the new Encyclopaedia Britannica. This great work is unique in

that it is absolutely abreast of the times. Every subject you want to know about, no matter how recent, is treated by an expert contributor, a world authority in his particular field. Here for the first time is an adequate and authoritative account of the war; here for the first time is presented a complete and accurate survey of all the stupendous changes, events and discoveries
